ZanQuery 1.00 Technical Preview 5

What's New ?

We have fixed many bugs present in the previous version of ZanQuery

1. Rebranded from ZQL to ZanQuery
2. Added strong hardcoded file paths
3. Fixed bug in the ZanQuery.dat file
4. Improved Show Databases command

Overview

Introduction

ZanQuery (formerly ZQL) is a SQL like Query Language, which is still in development and may not even come as a final product, this is stable but lacks in many features to create a database.

Features

Currently supported features:

1. Create Database
2. Show Database
3. Create Table
4. Add Columns & Rows
5. CMD

6. ZanvokDB

7. Ping

System Requirements

- 20MB of free disk space or higher

- 256MB RAM or higher

- Windows 7 or later

- 32 bit 1GHz Processor or later

Installation and Uninstallation

Simply Run ZanQuerySetup.exe and install ZanQuery to the C:\ZanQuery

Directory.

To uninstall simply delete C:\ZanQuery Directory

Quick Start Tutorials

Getting Started

- Run install.bat first and enter your product key when prompted, you receive your product key via e-mail with this build.
- Then run ZanQuery.exe and type 'activate' in prompt to activate your build, after activation you can use ZanQuery
